

## **ABSTRACT**

A turntable, such as one use for a Lazy Susan or for a carousel, comprises a plywood shelf and corresponding plywood rim construction where the rim is formed. Additionally, the rim of the present invention is segmented so as to be installable onto the

5 plywood shelf of the turntable in pieces and form up a completed rim around the perimeter of the turntable shelf. The rim height may also be selected for use in specific applications. The combination of the rim and shelf components for a turntable of the present invention are compatibly packageable as separate components thereby reducing storage and shipping resource requirements.
